*Field performance data came from recent Virginia Wheat Performance Trials, private breeders and Uniform Southern Red Nurseries while the milling quality data resulted from the publications and in-house evaluation of The Mennel Milling Company. Field yield score: 5 - 1 (77.8 - 50.6 bu/ac for 2 years and 81.5 - 52.7 bu/ac for 3 years); Test weight score: 5 - 1 (61.1 - 52.3 #/bu for 2 years and 60.9 - 51.9 #/bu for 3 years). Milling quality score: 5 - 1 from the best to the poorest; Maturity: E = early, M = medium, L = late; Scab resistance: MR = moderately resistant, M = medium resistance.

Disclaimer: the purpose of the above list is to improve the consistency of milling quality wheat coming to our flour mill. Mennel attempts to include as many varieties as possible based on the best information available to us. We receive no benefits from any seed companies or brokers by recommending their varieties other than as the above stated. Mennel will consider including any superior varieties submitted to us for evaluation along with agronomic and milling performance results. This list will be updated annually as new information becomes available. Mennel provides no expertise in wheat production. Growers should seek advice from seed providers and Ag extensionists and use your own experience on how to maximize the wheat production for the cultivars selected.
